METEOROLOGY

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 01 00 00	<u>THE ATMOSPHERE</u>	
050 01 01 00	<u>Composition, Extent, Vertical Division</u>	
050 01 01 01	<p>Describe the vertical division of the atmosphere, based on the temperature variations with height:</p> <ul style="list-style-type: none"> – List the different layers and their main qualitative characteristics – Describe the troposphere <ul style="list-style-type: none"> – Define tropopause – Mention the main values of the standard (ISA) atmosphere up to the tropopause – Describe the proportions of the most important gases in the air in the troposphere – Describe the variations of the height and temperature of the tropopause from the poles to the equator – Describe the breaks in the tropopause along the limits of the main air masses – Indicate the variations of the tropopause height with the seasons and the variations of atmospheric pressure – Define stratosphere <ul style="list-style-type: none"> – Describe the main variations with height of the composition of the air in the stratosphere – Mention the vertical extent of the stratosphere up to the stratopause. – Describe the reason for the temperature increase in the ozone layer. 	
050 01 02 00	<p><u>Temperature</u></p> <ul style="list-style-type: none"> – Define air temperature – List the units of measurement of air temperature used in aviation meteorology 	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 01 02 01	<p>Describe the mean vertical distribution of temperature up to 50 km.</p> <ul style="list-style-type: none"> – Mention general causes of the cooling of the air in the troposphere with increasing altitude, and of the warming of the air in the stratosphere 	
050 01 02 02	<p>Explain how local cooling or warming processes result in transfer of heat.</p> <ul style="list-style-type: none"> – Define radiation <ul style="list-style-type: none"> – Describe qualitatively solar radiation reaching the atmosphere – Describe qualitatively the filtering effect of the atmosphere on solar radiation – Describe qualitatively terrestrial radiation <ul style="list-style-type: none"> – Explain how terrestrial radiation is absorbed by some components of the atmosphere – Explain the greenhouse effect due to clouds and some gases in the atmosphere – Define and explain the process of conduction <ul style="list-style-type: none"> – Explain the role of conduction in the cooling and warming of the atmosphere – Define and explain the process of convection <ul style="list-style-type: none"> – Name situations in which convection occurs – Define and explain the process of advection <ul style="list-style-type: none"> – Name situations in which advection occurs – Describe transfer of heat by turbulence 	
050 01 02 03	<p>Lapse rates, stability and instability</p> <ul style="list-style-type: none"> – Describe qualitatively and quantitatively the temperature lapse rates of the troposphere and the meaning of thermal stability and instability and the environmental lapse rate (refer to 03 03 01) <p>Note: Dry adiabatic lapse rate = 1°C/100m or 3°C/1000 FT; average value at lower levels for saturated adiabatic lapse rate = 0.6°C/100m or 1.8°C/1000 FT</p>	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 01 02 04	<p>Describe development and types of inversions</p> <ul style="list-style-type: none"> – Explain the characteristics of inversions and of an isothermal layer. – Explain the reasons for the formation of the following inversions: <ul style="list-style-type: none"> – Ground inversion due to ground radiation (nocturnal radiation) – Subsidence inversion – Frontal inversion – Inversion above friction layer – Valley inversion – Tropopause inversion 	
050 01 02 05	<p>Temperature near the earth's surface, surface effects, diurnal variation, effect of clouds, effect of wind</p> <ul style="list-style-type: none"> – Describe how the temperature near the earth's surface is influenced by the nature of surface, diurnal and seasonal variations, the effect of clouds and of wind. – Explain the cooling and the warming of the air on the earth or sea surfaces – Sketch the diurnal variation of the temperature of the air in relation to the radiation of the sun and of the earth – Describe qualitatively the influence of the clouds on the warming and the cooling of the surface and the air near the surface <ul style="list-style-type: none"> – Distinguish between the influence of low or high clouds, thick or thin clouds – Explain the influence of the wind on the cooling and warming of the surfaces 	
050 01 03 00	<p><u>Atmospheric Pressure</u></p>	
050 01 03 01	<p>Barometric pressure, isobars</p> <ul style="list-style-type: none"> – Define atmospheric pressure 	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
	<ul style="list-style-type: none"> – List the units of measurement of the atmospheric pressure used in aviation – Describe the principle of the barometers: <ul style="list-style-type: none"> – mercury barometer – aneroid barometer – Describe isobars on the surface weather charts <ul style="list-style-type: none"> – Define H, L, trough, ridge, col 	
050 01 03 02	<p>Explain the pressure variation with height, contours</p> <ul style="list-style-type: none"> – Describe qualitatively the variation of the barometric lapse rate <p>Note: The average value for the barometric lapse rate near mean sea level is 27 FT (8m) per 1 hPa, at about 5500m/AMSL is 50 FT (15m) per 1 hPa</p> <ul style="list-style-type: none"> – For contours refer to 10 02 03 	
050 01 03 03	<p>Explain the reduction of measured pressure to mean sea level, QFF</p> <ul style="list-style-type: none"> – Describe the principle of calculation for QNH – Define QFF – Mention the use of QFF for surface weather charts 	
050 01 03 04	<p>Illustrate with a vertical cross section of isobaric surfaces a surface low pressure system, an upper air low pressure system, a surface high pressure system and an upper air high pressure system</p>	
050 01 04 00	<p><u>Atmospheric Density</u></p>	
050 01 04 01	<p>Describe the interrelationship between pressure, temperature and density</p> <ul style="list-style-type: none"> – Describe the distribution of the air density in the atmosphere. – Describe the effect of humidity on the density of air 	
050 01 05 00	<p><u>International Standard Atmosphere (ISA)</u></p>	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 01 05 01	<p>Explain the use of standardised values for the atmosphere</p> <ul style="list-style-type: none"> – List the main values of the ISA: <ul style="list-style-type: none"> – Mean sea level pressure, – Mean sea level temperature – The vertical temperature lapse rate up to 20km – Height and temperature of the tropopause – The composition of dry air within the troposphere, – List the standard pressure levels and equivalent standard flight levels – Calculate the standard temperature in degree Celsius for a given flight level – Determine a standard temperature deviation by the difference between the given outside air temperature and the standard temperature 	
050 01 06 00	<p><u>Altimetry</u></p>	
050 01 06 01	<p>Define ‘pressure altitude’ and ‘true altitude’</p> <ul style="list-style-type: none"> – Explain qualitatively the influence of the air temperature on the distance between: <ul style="list-style-type: none"> – The ground and the level read on the altimeter – Two flight levels – Determine by rule of thumb the true altitude for a given flight level and a given ISA temperature deviation 	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
	<p>Rule of thumb for altimetry calculations</p> <ol style="list-style-type: none"> a. The elevation of the airport has to be taken into account. The temperature correction has to be considered for the layer between ground and the position of the aircraft. b. The deviation of outside air temperature from ISA is considered to be constantly the same given value in the whole layer. c. The correction of temperature and pressure deviation may be treated independently of each other. d. All calculations are based on rounded pressure values to the nearest lower hPa. e. "4%-rule": The change of height is 4% when ISA temperature deviation is 10°C (per 1°C → 4%) 	
050 01 06 02	<p>Define height, altitude and flight level</p> <ul style="list-style-type: none"> – Name the altimeter settings associated to height, altitude, pressure altitude and flight level – Calculate the different values with given QNH and temperature <ul style="list-style-type: none"> – Flight level to true altitude – True altitude to flight level 	
050 01 06 03	<p>Give the ICAO definition of QNH, QFE and 1013.25 hPa</p> <ul style="list-style-type: none"> – Calculate the different readings on the altimeter when the pilot changes the altimeter setting – Illustrate with a numbered example the changes of altimeter setting and the associated changes in reading when the pilot climbs through the transition altitude or descend through the transition level – Derive the reading of the altimeter on the ground when the pilot uses the different settings 	
050 01 06 04	<p>Calculation of terrain clearance, lowest usable flight level, rule of thumb for temperature and pressure influences</p> <ul style="list-style-type: none"> – Calculate the terrain clearance, using the rule of thumb for the temperature and pressure influences – Calculate the lowest usable flight level in different conditions of temperature and pressure (given different air regulations) 	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 01 06 05	<p>Effect of accelerated airflow due to topography</p> <ul style="list-style-type: none"> – Describe qualitatively how the effect of accelerated airflow due to topography affects altimetry 	
050 02 00 00	<p>WIND</p>	
050 02 01 00	<p>Definition and measurement of wind</p>	
050 02 01 01	<p>Define wind and state how it is measured</p> <ul style="list-style-type: none"> – Define wind – State the meteorological units of measurement for wind <ul style="list-style-type: none"> – Explain how wind velocity is measured in meteorology <p>State how wind data is indicated in the surface and upper level charts and in the TAF and METAR messages (Refer to 050 10 01 01)</p>	
050 02 02 00	<p>The primary cause of wind</p>	
050 02 02 01	<p>Primary cause of wind, pressure gradient, coriolis force, gradient wind</p> <p>Define the term horizontal pressure gradient</p> <ul style="list-style-type: none"> – Explain how the pressure gradient force acts in relation to the pressure gradient – Explain how the coriolis force acts in relation to the wind – State the conditions necessary for the development of a geostrophic wind – Explain the development of a geostrophic wind <ul style="list-style-type: none"> – Indicate how the geostrophic wind flows in relation to the isobars and to the pressure gradient in the Northern and Southern hemispheres – Analyse the effect of changing latitude or air density on the geostrophic wind speed – Explain the gradient wind effect and indicate how the gradient wind differs from the geostrophic wind in cyclonic and anticyclonic circulation 	
050 02 02 02	<p>Explain the relationship between isobars and wind</p>	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
050 02 03 00	Explain the relationship between isobars and wind speed and direction	
050 02 03 01	The general global circulation Describe and explain the general global circulation Sketch or indicate on a map the general global wind pattern for all latitudes at low level in January and July <ul style="list-style-type: none"> – Name major low level wind systems in the polar regions – Name major low level wind systems in the mid latitudes – Name major low level wind systems in the tropics Sketch or indicate on a map the general global wind pattern at high level <ul style="list-style-type: none"> – Sketch or indicate on a map the westerly and easterly tropospheric winds 	
050 02 04 00	Turbulence	
050 02 04 01	Define turbulence and gustiness. List types of turbulence State the ICAO definition of turbulence List common types of turbulence (convective, mechanical, orographic, frontal, clear air turbulence)	
050 02 04 02	Explain the origins of turbulence. State where turbulence is usually found Explain the formation of atmospheric turbulence <ul style="list-style-type: none"> – Explain the formation of convective turbulence – Explain the formation of mechanical and orographic turbulence – Explain the formation of frontal turbulence – Explain the formation of clear air turbulence State where turbulence will normally be found	
050 02 05 00	Variation of wind with height	
050 02 05 01	Describe the variation of wind in the friction layer	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS									
	<p>Describe how the wind changes speed and direction descending through the friction layer in the northern and southern hemispheres (rule of thumb)</p> <ul style="list-style-type: none"> – Describe the airflow in the friction layer <p>Describe how wind changes with height in the friction layer</p> <p>State the surface and airmass conditions that influence the turbulence in the friction layer</p> <p>Name the factors that influence the vertical extent of the friction layer</p> <p>Note: Approximate value for variation of wind in the friction layer (values to be used in the examination)</p> <p>Variations between the geostrophic wind and the wind in the friction layer:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 33%;">Type of landscape</td> <td style="width: 33%;">Wind speed in friction layer in % of the geostrophic wind</td> <td style="width: 33%;">The wind in the friction layer blows slightly across the isobars towards the low pressure. Angle between wind direction and isobars</td> </tr> <tr> <td>over water</td> <td>ca. 70%</td> <td>ca. 10°</td> </tr> <tr> <td>over land</td> <td>ca. 50%</td> <td>ca. 30°</td> </tr> </table>	Type of landscape	Wind speed in friction layer in % of the geostrophic wind	The wind in the friction layer blows slightly across the isobars towards the low pressure. Angle between wind direction and isobars	over water	ca. 70%	ca. 10°	over land	ca. 50%	ca. 30°	WMO – No. 266
Type of landscape	Wind speed in friction layer in % of the geostrophic wind	The wind in the friction layer blows slightly across the isobars towards the low pressure. Angle between wind direction and isobars									
over water	ca. 70%	ca. 10°									
over land	ca. 50%	ca. 30°									
050 02 06 00	Local winds										
050 02 06 01	<p>Describe and explain anabatic and katabatic winds, land and sea breezes and venturi effects</p> <p>Describe and explain anabatic winds</p> <p>Describe and explain katabatic winds</p> <p>Describe and explain land and sea breezes</p> <p>Describe and explain the venturi effect, convergence in valleys and mountain areas</p>										
050 02 08 00	Standing waves										
050 02 08 01	<p>Describe and explain the origin and formation of standing waves</p> <p>State the conditions necessary for the formation of standing waves</p>

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
	belts, linking this to Sections 02 02 to 02 07	
	Sketch and describe the occluded or dying stage	
050 07 00 00	<u>PRESSURE SYSTEMS</u>	
050 07 01 00	<u>Location of the principal pressure areas.</u>	
050 07 01 01	Define or identify the location of the principal pressure areas.	
	Identify or indicate on a map the principal global high pressure areas in January and July	
	Identify or indicate on a map the principal global low pressure areas in January and July	
	Explain how these pressure areas are formed	
	Explain how the pressure areas move with the seasons	
050 07 02 00	<u>Anticyclone</u>	
050 07 02 01	Describe anticyclones (high pressure areas), types, general properties, cold and warm anticyclones, ridges and wedges, subsidence	
	List the different types of anticyclones (high pressure areas)	
	Describe airmass subsidence, its effect on the environmental lapse rate, and the associated weather	
	Describe the formation of the different types of anticyclones	
	Describe the formation of warm anticyclones	
	Describe the formation of cold anticyclones	
	Describe the formation of temporary cold anticyclones, ridges and wedges of high pressure	
	Describe the properties of the different forms of anticyclones	
	Describe the properties of and weather associated with warm anticyclones	
	Describe the properties of and weather associated with cold anticyclones	
	Describe the properties of and weather associated with ridges and wedges	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
	Describe the effects of blocking anticyclones	
050 07 03 00	<u>Non frontal depressions</u>	
050 07 03 01	Describe the formation and properties of thermal, orographic and secondary depressions, cold air pools and troughs.	
	Describe the effect of low level convergence and divergence in producing areas of low and high pressure	
	Describe the formation and properties of thermal depressions	
	Describe the formation and properties of orographic depressions (lee lows)	
	Describe the formation and properties of secondary depressions	
	Describe the formation and properties of cold air pools	
	Describe the formation and properties of troughs of low pressure	
050 08 00 00	<u>CLIMATOLOGY</u>	
050 08 03 00	<u>Typical weather situations in the mid-latitudes</u>	
050 08 03 01	Describe the formation of westerly waves and their effect on the climate zones	
	Describe and explain the formation of westerly waves	
	Describe and explain the global distribution of westerly waves	
	Explain the effect of westerly waves on the positions of the mid latitude weather systems	
050 08 03 02	Describe the main mid latitude high pressure zones	
	Identify or sketch on a map the mid latitude high pressure regions	
	Name the two main winter mid latitude cold high pressure regions	
	Describe the weather associated with cold ridges in the polar air (Refer to 050 07 02 01)	
050 08 03 03	Describe the weather associated with a uniform pressure pattern	
	Describe the weather associated with a uniform pressure pattern over continental Europe	

**INSTRUMENT RATING (A)
(METEOROLOGY)**

JAR-FCL REF NO	LEARNING OBJECTIVES	REMARKS
