

# JAR-STD Training Course

Authorities are required to provide training for their inspectors involved in the process of inspecting and Qualifying Flight Simulation Training Devices (FSTDs). Based on the intent of the STD Joint Implementation Procedures (JIPs), CJAA has an obligation to assist in the standardization of all NAAs involved in FSTD activities. As CJAA does not have the necessary in-house resources to provide suitable training for FSTD Inspectors, it was decided to sub-contract out the required foundation training to suitable training providers.

To date, one training provider has entered into an agreement with CJAA to provide a suitable foundation course for FSTD Inspectors. Training Technology International (TTI) offers FSTD training courses on an as and when basis depending on the needs of the Authorities and of Industry. These courses, which include both theoretical lectures and hands on practical sessions, are organized directly by TTI and are open to any interested party.

CJAA will endeavour to guarantee that these courses fulfill JAA's expectations regarding content and quality of the training given.

For course dates, further details including costs and location of future courses, please refer to

[www.tti-online.com](http://www.tti-online.com).

It should be noted that any course should be regarded as a starting point and that Authorities should provide further on-the-job training to ensure that the intent of the JAR STD family is applied in a fair and consistent manner. Smaller NAAs without established backgrounds in FSTD matters may be able to get assistance from one of the larger NAAs. CJAA can assist by providing suitable contacts.
